Category Name Requirements

Actionee HAIS

Sub Category

Subject Possible insufficient disk capacity on spec. systems

Description of Problem or Suggestion:

The disk capacity specified on some systems appears to be inadequate to meet both application need and operating system needs. For example, the Management Workstations specified in 4.1.2.3 require independent functioning from other workstations and servers, yet require only 0.296 GB of disk storage. This is sufficient to hold the operating system, system utilities and applications, ECMS applications, swap space, and meet its functional storage requirements. Similar situations apply to other spec'ed systems.

Originator's Recommendation

Review system specifications for total required disk storage capacity and/or clarify specifications to indicate that specified capacities are over and above any systems software requirements.

HAIS Response Date 2/28/95

Concur, The model numbers at PDR did not account for operating system swap space and certain application requirements. The analysis for total system disk capacity will continue with updated results reflected in the specification update at Rel A CDR.
